

A7RIII Webcam via AV.io 4k

** This capture method will capture audio from the A7RIII (Built-in mic on camera, or another mic plugged into the camera)

** This capture method does not require any plugins or additional software (besides Zoom or other conferencing software)

Items needed

- AV.io 4k
- USB 3.0 Cable (one end needs to be USB 3.0 Type B, other end can be the more common Type A, or USB-C)
- An HDMI Cable - Full size to HDMI-Micro (on the A7RIII)

- 1) Connect the AV.io 4k to your computer by plugging in the USB on the AV.io, and plugging the other end into your computer
- 2) Connect your HDMI cable to the AV.io
- 3) Connect the other end of the HDMI cable to the Sony A7RIII Micro HDMI port (on the left side of the camera under the top back flap)
- 4) On A7RIII - Turn the wheel on top of camera to Movie Mode (film strip icon) **You may still get an image in other modes, but they won't fill up the widescreen view, and it won't pass audio*
- 5) Turn A7RIII **on** if not already on
- 6) Open Zoom - Either in preferences > video, (or in a launched meeting under the video icon) select AV.io 4K **If using a mic connected to the camera, also select AV.io 4K Audio for the Microphone input*
